

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Noyes's College Text-Book of Chemistry

By W. A. NOYES, Professor in the University of Illinois
336 pages of text. 12mo

This *College Textbook of Chemistry* is designed, more especially, for students of the freshman or sophomore years in college who have not studied chemistry in high school. It is considerably briefer than the author's previous *Text-book of Chemistry*, and its style is exceptionally clear and simple.

As with all textbooks for beginners, two purposes have been constantly kept in mind while writing the book: the presentation of a few of the multitude of chemical facts which touch our modern life, in such a manner that they can be clearly understood, and the discussion of the theories and principles around which all our chemical knowledge is grouped.

The teacher of chemistry is embarrassed by the vast and ever increasing amount of knowledge at his disposal and is often tempted to present many more topics than the student can possibly remember. In trying to avoid this difficulty many facts ordinarily included in an elementary textbook have been omitted and those which are given are brought as far as possible into close logical relations.

The summary at the close of each chapter is a somewhat unusual feature of the book. It is hoped that these summaries will be found useful.

Success in the study of chemistry depends especially on the ability to learn new facts in their relation to those which have already been acquired and on the cultivation of a logical as distinguished from an arbitrary memory. The exercises at the close of each chapter and questions occasionally inserted in the text are designed to assist the student in this direction.

Quantitative Analysis

By GEORGE MCPHAIL SMITH, Professor of Chemistry in the University of Washington (recently at the University of Illinois). Cloth, Octavo, 206 pages. \$1.75.

This new text-book in Quantitative Chemical Analysis is thorough and well-arranged. It includes full laboratory instructions as well as the material for the lecture-room, and contains carefully chosen types of gravimetric and volumetric analyses. The laboratory directions are explicit and sufficiently detailed to permit the student to work largely without supervision. The sections devoted to stoichiometrical problems and to questions upon the subject matter will be particularly welcome to instructors, as they give the student an insight into a wide variety of processes.

A Short Course in Mathematics

By ROBERT E. MORITZ, Professor of Mathematics in the University of Washington. Cloth, 12mo, 236 pages.

A text containing the material essential for a short course in Freshman mathematics which is complete in itself, and which contains no more material than the average Freshman can assimilate. The book will constitute an adequate preparation for further study, and will enable the student to take up the usual course in analytical geometry without any handicap.

Among the subjects treated are: Factoring, Radicals, Fractional and Negative Exponents, Imaginary Quantities; Linear and Quadratic Equations; Coordinates, and Simple and Straight Line Graphs; Curve Plotting, Maxima and Minima; Areas; The General Angle and its Measures, The Trigonometric or Circular Functions, Functions of an Acute Angle; Solution of Right and Oblique Triangles; Exponents and Logarithms; The Four Cases of Oblique Triangles; Problems Involving Triangles.

In Preparation

Plane Trigonometry

By JOHN W. YOUNG and FRANK M. MORGAN, Professors of Mathematics in Dartmouth College. Cloth, 12mo, about 120 pages.

This new Plane Trigonometry was prepared to supply the need for a brief text emphasizing the numerical aspects and applications of trigonometry. It embodies the characteristic features of the widely approved sections devoted to trigonometry in "Elementary Mathematical Analysis," the earlier work by Professors Young and Morgan. The material has been carefully revised, and fully half of the present book is entirely new. Among the distinctive sections of this Trigonometry are those which explain the use of the haversine. The authors stress the value of computation and of logarithmic tables; and therefore tables of haversines and other new tables are included.

THE MACMILLAN COMPANY

PUBLISHERS

NEW YORK

The Journal of General Physiology

EDITED BY

JACQUES LOEB, New York, N. Y.

W. J. V. OSTERHOUT, Cambridge, Mass.

The Journal of General Physiology is devoted to the explanation of life phenomena on the basis of the physical and chemical constitution of living matter.

The Journal of General Physiology is issued bimonthly, one volume of about 600 pages appearing in a year. Contributions should be addressed to the editors of **The Journal of General Physiology**, The Rockefeller Institute for Medical Research, Avenue A and 66th Street, New York, or 60 Buckingham Street, Cambridge, Massachusetts. The papers should preferably not exceed twenty printed pages, not counting the space occupied by illustrations. Authors receive one hundred reprints of their papers free of charge; additional copies may be obtained at cost.

CONTENTS OF VOLUME II, No. 3, JANUARY 20, 1920

- MOORE, A. R. The action of strychnine and nicotine on the neuromuscular mechanism of *Asterias*.
- PARMENTER, CHARLES L. The chromosomes of parthenogenetic frogs.
- HARVEY, E. NEWTON. Studies on bioluminescence. XII. The action of acid and of light in the reduction of *Cypridina* oxyluciferin.
- MCGUIRE, GRACE, and FALK, K. GEORGE. Studies on enzyme action. XVIII. The saccharogenic actions of potato juice.
- HECHT, SELIG. The photochemical nature of the photosensory process.
- LINHART, GEORGE A. The free energy of biological processes. Preliminary paper.
- HARVEY, R. B. Apparatus for measurement of oxidase and catalase activity.
- LOEB, JACQUES. Influence of a slight modification of the collodion membrane on the sign of the electrification of water.
- LOEB, JACQUES. Influence of the concentration of electrolytes on some physical properties of colloids and of crystalloids.
- LOEB, JACQUES. Quantitative laws in regeneration. I.

Subscription price per year (one volume), \$5.00

Australia

Problems and Prospects

By SIR CHARLES G. WADE

Net \$2.00

An interesting study of the main features of present day Australia and the social, industrial and land questions.

Contents: Climate and Resources; Industrial and Social Problems; State Undertakings and Finance; Constitution; Land Settlement; Imperial Migration; The Future.

The Foundations of Geography in the Twentieth Century

By FRANZ SCHRADER

\$1.15

This address delivered at both Oxford and the University of Liverpool by Prof. Schrader of the Ecole d'Anthropologie at Paris provides a rapid summary of the present state and problems of geographical science and its relation to geological science on the one hand and to the practical questions of commerce and transportation on the other.

A History of the Sikhs

From the Origin of the Nation to the Battles of the Sutlej

By JOSEPH DAVEY CUNNINGHAM

\$3.85

The third edition of this valuable work originally issued in 1849 corrected in minor details to conform with modern knowledge. It provides not only a history of the Sikhs as a people but also places Sikhism in the general history of humanity by showing its connection with the other creeds of India. The author writes from an extended first hand knowledge of the Sikhs gained in the Political Department of the East India Company. As a consequence of criticisms of the Government in his book he was dismissed from the department and sent back to regimental duty. He died in 1851, aged 39.

The Mechanism of Exchange

A Handbook of Currency, Banking and Trade

By J. A. TODD

Net \$3.75

A second edition of this important work in which a good deal of additional matter has been added and the statistical matter brought down to date as far as possible.

This book can be profitably studied by everyone who has to do with either sale or purchase of foreign goods. The factors which control foreign exchanges are clearly explained and enable the business man to carefully judge the direction and extent of their trend.

The Division of the Product of Industry

By ARTHUR L. BOWLEY

\$1.15

The importance of this telling analysis by the Professor of Statistics in the University of London may be gathered from this significant statement.

"The wealth of the country, however divided, was insufficient before the war for a general high standard; there is nothing as yet to show that it will be greater in the future. Hence the most important task incumbent on employers and workmen alike, is to increase the national product, and that without sacrificing leisure and the amenities of life."

Laboratory Animals

Prices for the Month of December

Guinea Pigs weighing not less than 8 ozs. Each	\$1.10
Guinea Pigs weighing not less than 12 ozs. Each	1.25
Guinea Pigs weighing not less than 16 ozs. Each	1.45
Rabbits, per pound, 45 cents Minimum price	1.00
White Rats weighing not less than 80 grams. Per hundred	33.00
White Rats weighing not less than 120 grams. Per hundred	38.00
White Mice weighing not less than 10 grams. Per hundred	20.00
White Mice weighing not less than 16 grams. Per hundred	22.00

In case more females than males are desired (or the reverse, in the case of rabbits), an extra charge of 25 per cent. is made.

Pregnant animals are supplied at an increase of 150 per cent. over the regular price.

We are in a position to breed animals in accordance with special requirements.
